DETAILED ACTION

1. This Office Action is the answer to the Terminal Disclaimer filed on May 9, 2007, which paper has been placed of record in the file.
2. Claims 1, 3-5, 7-9, 11, 13, 14, 16-18, 20, 21, 23, 24, and 26-45 are pending in this application.

Allowable Subject Matter/Reasons for Allowance

3. Claims **1, 23, 31, and 41** are allowed over the prior arts cited records.

The closest prior arts are:

1) Gottfried (US 6,270,011) discloses a method for providing secure transactions with credit cards by adding a fingerprint scanner at the point-of-sale to obtain fingerprint data, so that a credit card company database can verify the fingerprint data against stored fingerprint information and verify the transaction accordingly. The method is integrated into the existing negotiation protocol between a point-of-sale system and a credit card company database, and uses a human fingerprint and a secure algorithm. The credit card company has the customer fingerprint for comparison on its existing database, and the existing credit card operation will be usual, with the fingerprint data added to it to authenticate and secure the operation via the communication media while making a point-of-sale purchase. In the case of an Internet purchase, the inventive method incorporates an authorization adaptor connected to the user PC, and once the user has made the purchase request, an encrypted communication is then commenced in which a token is sent by the credit card company to the user PC; requesting

fingerprint data. The authorization adaptor provides the fingerprint scan, and sends the data to the user PC in encrypted form, for transfer to the credit card company by a secure communication, for authorization. The fingerprint scanner is based on use of a new sensor employing a technology that maps and matches fingerprints, using coincidence of the features (minutia) on as few as twelve similar points, to determine a match.

2) Talati (US 5,903,878) discloses a method for providing validated electronic commerce transactions. A transaction order generated by a purchaser has a unique transaction identifier associated therewith and the purchase order is transmitted to a merchant and then to a transaction administrator. The transaction administrator contacts the original purchaser and provides the generated unique transaction identifier to confirm whether or not the transaction order was initially provided by the purchaser. Upon verification of origination of the transaction order by the purchaser and other transaction information, the transaction administrator notifies the merchant and the transaction may be completed.

Therefore, it is clear from the description of Gottfried's and Talati's inventions that the prior arts do not considered the possibility of: initiating a verification connection between said consumer location and said third party contractor location, said verification connection including a verification web browser window provided from said on-line merchant location to said consumer location to initiate said verification connection between said consumer location and said third party contractor location, said verification

Art Unit: 3692

connection being independent of, and bypassing said on-line merchant location, as included in claims 1, 23, 31, and 41.

4. Claims (3-5, 7-9, 11, 39, 40), (24, 26-30, 45), (32-38), and (13, 14, 16-18, 20, 21, 42-44) are allowed because they are dependent claims of the allowable independent claims 1, 23, 31, and 41 above, in that order.

Conclusion

5. Claims 1, 3-5, 7-9, 11, 13, 14, 16-18, 20, 21, 23, 24, and 26-45 are allowed.
